

Creative World

Creative World is a large gallery on two levels. Downstairs, I can build many different types of **structures**, like houses and bridges.

In California, we sometimes have earthquakes. I can learn how to **build a strong structure** that won't fall down in an earthquake

I may hear a low rumbling noise in Creative World.
That noise is from the **earthquake simulator**. It
may seem like a real earthquake, but it is just
pretend, and I am safe.

Upstairs, I can learn about transportation.
Transportation is how people get from one place to another, like a car, train, or boat. What transportation did I use to get to the museum today?

I can also learn about different types of energy. Boats, cars, trains, and even our own bodies use different sources of **energy to move**.
